

allgemein G1	Ichnofossilien G2	Mikroorganismen, Phytoplankton G3		Porifera/ Cnidaria G4	Lophophorata G5	Mollusca G6		Echinodermata G7	Arthropoda G8		Chordata G9	Plantae G10	
 Fossilfundstelle	 Spurenfossil	 Stromatolith	 Radiolaria	 Spiculae (Schwammnadeln)	 Brachiopoda (Armfüßer)	 Orthoceratida	 Belemnitoidea (Belemniten)	 Echinozoa (Seeigel)	 Trilobitomorpha (Trilobiten)		 Graptolithida (Graptolithen)	 Palynomorphe (Sporen/Pollen)	
 Schill/ Schalenreste	 Bau, Höhle	 Algen	 Acritarchen	 Stromatoporida		 Ammonoidea (Ammoniten)		 Echinozoa (Seeigel)	 Xiphosura	 Conchostraca (Muschelschaler)	 Graptolithida (Graptolithen)	 Blätter	 Wurzeln
	 Fährte	 Charophyten (z. B. Armleuchter- Algen)	 <i>Pennales</i>	 <i>Centrales</i>	 Korallen (allgemein)	 Nautiloidea	 Scaphopoda (Kahnfüßer)	 Trochiten (Seelilien- Stielglieder)	 Ostracoda (Muschelkrebse)	 Arachnida (Spinnentiere)	 Conodonta	 Coniferales (Koniferen)	 Filicophyta (Farne)
 pyritisierte Mikrofossilien		 Archaeocyathida	 Dinoflagellata	 Rugosa (Tetracorallia)	 Bryozoa (Moostierchen)	 Bivalvia (Muscheln)		 Crinoidea (Seelilien)	 Hexapoda (Insekten)	 Flügel	 Schuppen	 Xylit (Holz)	 Ginkgophyta
 kalkige Mikrofossilien		 Chitinozoa	 Foraminifera, allgemein		 Tabulata (tabulate Korallen)	 Gastropoda (Schnecken)		 Asterozoa (Seesterne)			 Vertebrata, Knochen		 Ginkgophyta
 kieselige Mikrofossilien		 Nannofossil	 agglutinierend			 Scleractinia (Hexacorallia)						 Pisces (Fische, Fischreste)	
 organische "Reste"		 Coccolithophorida	 Silicoflagellata								 Zähne
